

Peaceful is beautiful

Sonesse™ 30

Sonesse™ 30 Seeing is believing

You may notice the blinds move, but you won't hear them. Somfy presents a revolutionary new motor called Sonesse. The new Sonesse range provides near silent motorisation for roller shading solutions, compatible with all Somfy radio operated control systems.

Sonesse™ 30: For smaller window coverings, the compact Sonesse™ 30 is easily concealed within headrails and cassette systems. Somfy's comprehensive control range will ensure that your silent solution can be integrated into almost any project and with its white head and slimline appearance, the Sonesse™ 30 will blend discreetly with the most sophisticated décor.

Silence

Extremely low sound level. Sonesse makes less noise than a manual control, you will hardly hear it operating!

Efficiency

Sonesse 30 silently brings roller shades to life. With just one movement, they enable the room to be set to the right ambiance.

Flexible

Multiple control options are available including Radio Technology Somfy (RTS). Control options are also available to allow simple integration with home automation systems.

Easy to install

Simple to wire and RTS technology enables blinds to be set remotely.
